

2021 DEKALB Canola Straight Cut Lineup

Straight cut hybrids are selected for their excellent harvestability and every consideration has gone into speeding up harvest while reducing losses and risk. There are a lot of factors getting to the day of direct combining. Increased pod integrity in our genetics is the primary driver for reducing losses. In addition to pod integrity, our DEKALB SC hybrids feature early maturity and quicker dry down to foster an earlier, faster and smoother harvest. Natural dry down means a desiccant isn't always necessary, removing the need for careful stewardship requirements associated with another spray pass in the fall over the crop.
