

CANOLA BLOOM STAGE GUIDE

OPTIMUM TIME TO SPRAY PROLINE®

SCOUT YOUR
FIELDS TO FIND
THIS CROP STAGE

10% bloom

~10 open flowers
on the main stem

20% bloom

~14-16 open flowers
on the main stem

30% bloom

~20 open flowers
on the main stem

50% bloom

>20 open flowers
on the main stem

The goal when applying Proline fungicide is to protect as many canola flower petals as possible, prior to significant petal drop.

The optimum timing is based on growing conditions and can be anywhere between 20% and 50% bloom.
