COMMERCIAL SOLUTION

WARNING – EYE AND SKIN IRRITANT
REGISTRATION NO. 27736
PEST CONTROL PRODUCTS ACT
ACTIVE INGREDIENT: Glyphosate, 540 grams acid equivalent per litre, present as potassium salt.
Water Soluble Herbicide for silvicultural sites.
READ THE LABEL AND ATTACHED BROCHURE BEFORE USING

USAGE COMMERCIAL SOLUTION

ATTENTION POISON

AVERTISSEMENT - IRRITANT POUR LA PEAU ET LES YEUX
No. D’HOMOLOGATION 27736
LOI SUR LES PRODUITS ANTIPARASITAIRE
PRINCIPE ACTIF : Glyphosate, 540 grammes d’équivalent acide par litre, présent à l’état de sel de potassium.
Herbicide hydrosoluble pour les sites d’interventions sylvicoles.

VisionMAX Silviculture Herbicide

1.0 PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN.

HARMFUL IF NOTED.

CAUSES EYE AND SKIN IRRITATION.

Avoid contact with eyes, skin or clothing.

Avoid inhaling spray mist.

Wear a long-sleeved shirt and long pants during mixing, loading, application, clean-up and repair. In addition, wear goggles or a face shield and chemical-resistant gloves during mixing and loading, clean-up and repair.

The restricted entry interval is 12 hours after application for all agricultural uses.

Workers who must enter fields within this time period should wear a long-sleeved shirt, long pants and chemical-resistant gloves.

1.1 FIRST AID

If swallowed: Call a poison control centre or doctor immediately for treatment advice. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes. Call a poison control centre or doctor for further treatment advice.

If in eyes: Hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for further treatment advice.

If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control centre or doctor for further treatment advice.

1.2 TOXICOLOGICAL INFORMATION

Trust symptomatically.

1.3 NOTICE

Read NOTICE before buying or using. If notice terms are not acceptable, return at once unopened.

Not for reformulation or repackaging.

NOTICE TO USER

This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label.

1.4 ENVIRONMENTAL HAZARDS

• TOXIC to aquatic organisms and non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE.

• To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil or clay.

• Avoid application when heavy rain is forecast.

• Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.

1.5 PHYSICAL OR CHEMICAL HAZARDS

Spray solutions of this product should be mixed, stored, and applied only in stainless steel, aluminum, fiberglass, plastic and plastic-lined steel containers. Do not mix, store or apply this product or spray solutions of this product in galvanized steel or unlined steel (EXCEPT STAINLESS STEEL) CONTAINERS ON SPRAY TANKS. This product or spray solutions of this product must with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture. This gas mixture could flash or explode, causing serious personal injury, if ignited by open flame, spark, welder’s torch, lighted cigarette or other ignition source.

1.6 STORAGE

Store product in original container only.

Avoid contamination of seed, feed, and foodstuffs.

1.7 DISPOSAL

RECYCLABLE CONTAINERS:

Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1) Trim or pressure-shrink the empty container. Add the rinsings to the spray mixture in the tank.

2) Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

RETURNABLE CONTAINERS:

Do not reuse container for any other purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

REFILLABLE CONTAINERS:

For disposal, this container may be returned to the point of purchase (distributor/dealer). It must be refilled by the distributor/dealer with the same product. Do not reuse this container for any other purpose.

For information on the disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for the clean-up of spills.

1.8 SPILLS

Soak up small amounts of spill with absorbent clays. Sweep or scoop up spilled materials and dispose of in an approved landfill. Wash down surfaces (floors, truck beds, etc.) with detergent and water solutions.

1.3 Notice

Read NOTICE before buying or using. If notice terms are not acceptable, return at once unopened.

Not for reformulation or repackaging.

NOTICE TO USER

This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label.

1.4 Environmental Hazards

• Toxic to aquatic organisms and non-target terrestrial plants. Observe buffer zones specified under DIRECTIONS FOR USE.

• To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil or clay.

• Avoid application when heavy rain is forecast.

• Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.

1.5 Physical or Chemical Hazards

Spray solutions of this product should be mixed, stored, and applied only in stainless steel, aluminum, fiberglass, plastic and plastic-lined steel containers. Do not mix, store or apply this product or spray solutions of this product in galvanized steel or unlined steel (EXCEPT STAINLESS STEEL) CONTAINERS ON SPRAY TANKS. This product or spray solutions of this product must with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture. This gas mixture could flash or explode, causing serious personal injury, if ignited by open flame, spark, welder’s torch, lighted cigarette or other ignition source.

1.6 Storage

Store product in original container only.

Avoid contamination of seed, feed, and foodstuffs.

1.7 Disposal

RECYCLABLE CONTAINERS:

Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1) Trim or pressure-shrink the empty container. Add the rinsings to the spray mixture in the tank.

2) Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

RETURNABLE CONTAINERS:

Do not reuse container for any other purpose. For disposal, this empty container may be returned to the point of purchase (distributor/dealer).

REFILLABLE CONTAINERS:

For disposal, this container may be returned to the point of purchase (distributor/dealer). It must be refilled by the distributor/dealer with the same product. Do not reuse this container for any other purpose.

For information on the disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for the clean-up of spills.

1.8 Spills

Soak up small amounts of spill with absorbent clays. Sweep or scoop up spilled materials and dispose of in an approved landfill. Wash down surfaces (floors, truck beds, etc.) with detergent and water solutions.
In case of an emergency involving this product, call Bayer CropScience collect, day or night:

**1.9 EMERGENCY NUMBERS**

**2.0 GENERAL INFORMATION**

Glyphosate is not to be applied using hand-wring or hand-dipping methods. As this product is not registered for the control of pests in aquatic systems, **DO NOT use to control aquatic pests.**

**Do not treat vegetation under poor growing conditions such as drought stress, disease or insect damage as reduced vegetation control may result. Reduced results may also occur when treating vegetation heavily covered with dust. Rainfall occurring soon after application may reduce effectiveness. Heavy rainfall within 2 hours after application may wash the product off the foliage and a repeat treatment may be required.**

**2.1 APPLICATION INSTRUCTIONS**

**2.1.1 AERIAL EQUIPMENT**

This product may be applied using aerial and ground spray or wiper equipment for silvicultural site preparation, rights-of-ways, and contour release, and ground spray or wiper equipment for deciduous release, forest road-side vegetation management and forest tree planting nurseries. Woody vegetation may be controlled by injection application of this product. See the “Mixing,” “Application Instructions” and “Selective Equipment” sections of this label for information on how to properly apply this product.

**For herbaceous weeds, woody brush, and trees controlled, see the “Vegetation Controlled” section of this label.**

**For specific site preparation instructions, see the “Site Preparation, Forest Roadside and Rights of Way Vegetation Management” section of this label.**

**For specific fork or deciduous release instructions see the “Contour Release” and “Deciduous Release” sections of this label.**

**For specific industrial, military base, rights-of-way and public areas instructions see the “Industrial, Military Bases, Rights-of-Way, Recreational, and Public Areas” section of this label.**

Treatments should not be made to trees or brush after fall leaf drop has begun.

**For specific forest tree planting nursery instructions, see the “Forest Tree Planting Nurseries” section of this label.**

**For specific injection application instructions, see the “Injection Applications” section of this label.**

**For specific instructions on use of wick or wiper applicators for vegetation control, see the “Selective Equipment” section of this label.**

This product moves through the plant from the point of foliage contact to the roots of the root system. Visible effects on most annual weeds occur within 2 to 4 days, but on most susceptible perennial weeds, trees and woody brush, may not occur until 7 to 24 days. Extremely cool or cloudy weather at treatment time may slow down activity of this product and delay visual effects or control. Visible effects are a gradual wilting and yellowing of the plant which advances to complete dormancy of this product and delay visual effects or control. Visible effects on most crops, trees or other vegetation growing in water or aquatic species is likely.

**3.0 MIXING AND APPLICATION INSTRUCTIONS**

**3.1 PRECAUTIONS**

**ATTENTION: AVOID CONTACT WITH FOLIAGE, GREEN STEMS, OR FRUIT OF CROPS, DESIRABLE PLANTS AND TREES SINCE SEVERE INJURY OR DESTRUCTION MAY RESULT.**

**APPLY THESE SPRAY SOLUTIONS IN PROPERLY MAINTAINED AND CALIBRATED EQUIPMENT CAPABLE OF DELIVERING DESIRED VOLUMES. HAND-OUT APPLICATIONS SHOULD BE PROPRIETARILY DIRECTED TO AVOID SPRAYING DESIRABLE PLANTS.**

**AERIAL EQUIPMENT**

To control or suppress herbaceous weeds, woody brush and trees, apply 2.0 to 4.0 liters of this product per hectare using aerial, ground boom or boomsprays, or mist blower equipment, or apply at 0.7 to 3.3 liters of solution using hand-held high volume equipment. For control of perennial herbaceous weeds in site preparation applications using aerial, ground boom or boomsprays, or mist blower equipment, apply 4.6 to 9.2 liters of this product per hectare as directed in the recommended volume of clean water to the foliage of actively growing vegetation.

For specific rates for wick or wiper applicators, see the “Selective Equipment” section of this label.

**3.2 APPLICATION INSTRUCTIONS**

**3.2.1 AERIAL EQUIPMENT**

Apply only by fixed-wing or rotary aircraft equipment which has been functionally and operationally calibrated for the atmospheric conditions of the area and the application rates and conditions of this label. Label rates, conditions and precautions are product specific. Read and understand the entire label before opening this product. Apply only at rates recommended
for aerial application on the label in 20 to 100 L of water per hectare unless otherwise directed on this label.

For aerial application in site preparation refer to section 5.1.1 of this label. For aerial application in forest and woodlands refer to section 5.1.2 of this label. For aerial application in industrial, rights-of-way and military bases refer to section 5.3.5 of this label.

Where no rate for aerial application appears for the specific use, this product cannot be applied by any type of aerial equipment. As density of vegetation increases, spray volume should be increased within recommended range to ensure complete coverage.

Ensure uniform application—to avoid streaked, uneven or overlapapplication, use appropriate marking devices, or equivalent electronic positioning systems (GPS).

Thoroughly wash aircraft, especially landing gear, after each day of spraying to remove residues of this product accumulated during spraying or from spills. PROLONGED EXPOSURE OF THIS PRODUCT TO UNCOATED STEEL SURFACES MAY RESULT IN CORROSION AND POSSIBLE FAILURE OF THE PART. LANDING GEAR IS MOST SUSCEPTIBLE. The maintenance of an organic coating (paint) which meets aerospace specification MIL-C-38412 may prevent corrosion.

Use Precautions

Apply only when meteorological conditions at the treatment site allow for complete and even crop coverage. Apply only under conditions of good practice specific to aerial application as outlined in the National Aerial Pesticide Application Manual, developed by the Federal/Provincial/Territorial Committee on Pest Management and Pesticides. Do not apply to any body of water. Avoid drifting of spray onto any body of water or other non-target areas. Specified buffer zones should be observed.

Coarse sprays are less likely to drift; therefore do not use nozzles or nozzle configurations which dispense spray as fine spray droplets. Do not angle nozzles forward into the airstream and do not increase spray volume by increasing nozzle pressure. Do not spray during period of dead calm or when wind velocity and direction pose a risk of spray drift. Do not spray when wind is blowing towards nearly sensitive crop, garden, terrestrial habitat (such as a shelter belt) or aquatic habitat.

Airblast or mist blower application

DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. Boom height must be 60 cm or less above the crop or ground.

Field sprayer application

DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply direct spray above plants to be treated. DO NOT apply when wind speed is greater than 16 km/h at the application site as measured outside of the treatment area on the upwind side. For airblast applications, turn off outward pointing nozzles at row ends and outer rows.

Aerial application

DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. To reduce drift caused by turbulent energy vectors, the nozzle distribution along the spray boom length MUST NOT exceed 60% of the wing or inter-row span.

Buffer zones

Use of the following spray methods or equipment DO NOT require a buffer zone: hand-held or backpack sprayer and spot treatment, inter-row hooded sprayer, low-clearance hooded or shielded sprayers that ensure spray drift does not come in contact with orchard crop fruit or foliage, or direct and soil incorporation.

Field sprayer application or for forestry use, buffer zones for protection of sensitive terrestrial habitats are not required; however, the highest available application strategies which minimize off-site drift, including meteorological conditions (for example, wind direction, low wind speed) and spray equipment (for example, coarse droplet sizes, minimizing height above canopy), should be used. Applications must, however, observe the specified buffer zones for protection of sensitive aquatic habitats.

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands) and sensitive aquatic habitats (such as streams, rivers, lakes, ponds, creeks, marshes, streams, reservoirs, wetlands and estuaries/estuarine water bodies).

3.3.5 HAND HELD AND HIGH VOLUME EQUIPMENT (USE COARSE SPRAYS ONLY)

For control of herbaceous weeds, woody brush and trees listed in the "Vegetation Controlled" section of this label using conventional boom equipment—Apply this product in 200 to 300 L of clean water per hectare as a broadcast spray using no more pressure than 275 kPa.

3.3.6 MIST BLOWER EQUIPMENT

For control of herbaceous weeds, woody brush and trees listed in the "Vegetation Controlled" section of this label—Use the recommended rate of this product in at least 200 L of water per hectare.

3.4 BUFFER ZONES

i) Field sprayer application

DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply direct spray above plants to be treated. DO NOT apply when wind speed is greater than 16 km/h at the application site as measured outside of the treatment area on the upwind side. For airblast applications, turn off outward pointing nozzles at row ends and outer rows.

ii) Airblast or mist blower application

DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. Boom height must be 60 cm or less above the crop or ground.

3.5 HAND HELD AND HIGH VOLUME EQUIPMENT (USE COARSE SPRAYS ONLY)

For control of herbaceous weeds, woody brush and trees listed in the "Vegetation Controlled" section of this label using conventional boom equipment—Apply this product in 200 to 300 L of clean water per hectare as a broadcast spray using no more pressure than 275 kPa.

3.6 MIST BLOWER EQUIPMENT

For control of herbaceous weeds, woody brush and trees listed in the "Vegetation Controlled" section of this label—Use the recommended rate of this product in at least 200 L of water per hectare.
4.1 ANNUAL WEEDS

ANNUAL GRASSES

- Barnyard Grass
- Echinochloa crus-galli
- Blue Grass (annual)
- Poa annua
- Crab Grass (large)
- Digitaria sanguinalis
- Crab Grass (smooth)
- Digitaria ischaemum
- Denny Bluegrass
- Festuca arundinacea
- Full Pasture
- Paspalum distichum/Russell
- Giant Foxtail
- Setaria faberi
- Green Foxtail
- Eleusine indica
- Persian Brome
- Echinochloa frumentacea

ANNULAR SEDGE

- Volunteer Barley
- Hordeum sp.
- Volunteer Barnyard
- Hordeum sp.
- Volunteer Wheat
- Triticum sp.
- Wild Oats
- Avena sp.
- Wild Proser Millet
- Panicum miliaceum
- Yellow Foxtail
- Setaria glauca

OTHER

- Dodder
- Cuscuta sp.
- Prickly Lettuce
- Lactuca scariola
- Ragweed (common)
- Ambrosia artemisiifolia
- Redroot Pigweed
- Amaranthus retroflexus
- Round-Headed Mallow
- Malva pusilla
- Russian Thistle
- Salsola salsola
- Shepherds Purse
- Capsella bursa-pastoris
- Smooth Pigweed
- Amaranthus hybridus
- Southcress (annual)
- Cucumis sativus
- Stickyweed
- Nicotiana arvensis
- Storksbill
- Erodium cicutarium
- Velvetleaf
- Abutilon megapotamicum
- Volunteer Canola
- Brassica sp.
- Volunteer Flax
- Linum sp.
- Wild Buckwheat
- Polygonum convolvulus
- Wild Mustard
- Sinapis arvensis
- Wild Tomato
- Solanum lycopersicum

4.2 PERENNIAL GRASSES/SEDGES

- Blue Grass (Canada)
- Poa compressa
- Blue Grass (Kentucky)
- Poa pratensis
- Bromegrass (smooth)
- Bromus inermis
- Cattail (common)
- Typha latifolia
- Reed (common)
- Phragmites australis

4.3 PERENNIAL BROADLEAFED WEEDS

- Alfalfa
- Medicago sativa
- Cottontop
- Echinops ritro
- Common Milkweed
- Asclepias syriaca
- Poison Ivy
- Rhus radicans
- Purple Loosestrife
- Lythrum salicaria
- Sawtooth (persicaria)
- Persicaria arvensis
- Thistle (Canada)
- Cirsium arvense
- Russian Thistle
- Salsola sp.

5.1 RESTRICTED USES - FOREST AND WOODLANDS MANAGEMENT

Ground/Aerial Application for Sites greater than 500 ha (Forestry Unit) Aerial Application for Sites 500 ha or less (Woodlands Use)

NOTICE TO USER: This control product is to be used only in accordance with the directions on this label. It is an offence under the Pest Control Products Act to use a control product under unsatisfactory conditions.

NATURE OF RESTRICTION: This product is to be used only in the manner authorized; consult local pesticide regulatory authorities about use permits which may be required.

Do not apply to any body of water populated with fish or used for domestic purposes.

Do not use in areas where adverse impact on domestic water or aquatic species is likely in order to reduce the drift hazard to non-target plants and aquatic species when accidentally spraying/sprinkling/cultural sites, ensure that appropriate buffer zones are maintained.

NOTICE TO USER: This product is to be used only in the manner authorized; consult local pesticide regulatory authorities about use permits which may be required.

Do not apply to any body of water populated with fish or used for domestic purposes.

Do not use in areas where adverse impact on domestic water or aquatic species is likely in order to reduce the drift hazard to non-target plants and aquatic species when accidentally spraying/sprinkling/cultural sites, ensure that appropriate buffer zones are maintained.

NATURE OF RESTRICTION: This product is to be used only in the manner authorized; consult local pesticide regulatory authorities about use permits which may be required.

Do not apply to any body of water populated with fish or used for domestic purposes.

Do not use in areas where adverse impact on domestic water or aquatic species is likely in order to reduce the drift hazard to non-target plants and aquatic species when accidentally spraying/sprinkling/cultural sites, ensure that appropriate buffer zones are maintained.

NATURE OF RESTRICTION: This product is to be used only in the manner authorized; consult local pesticide regulatory authorities about use permits which may be required.

Do not apply to any body of water populated with fish or used for domestic purposes.

Do not use in areas where adverse impact on domestic water or aquatic species is likely in order to reduce the drift hazard to non-target plants and aquatic species when accidentally spraying/sprinkling/cultural sites, ensure that appropriate buffer zones are maintained.
Some autumn cutters are acceptable provided no major leaf fall has occurred on undesirable brush and tree species. For conifer release, apply where cutters have been established for more than a year. Vegetation should not be disturbed immediately prior to application. A spray test application should be made at any time of year, except when cold temperatures prevent solution penetration to bark well. This treatment may be used at any time of year, except during periods of heavy sap flow or when low temperatures prevent solution penetration to bark well.

5.2.4 INJECTION APPLICATIONS

Woody vegetation may be controlled by injection application of this product. Apply using suitable equipment, which must penetrate into living tissue, at a rate of at least 20 mL (either uninhibited or 1:1 with water) per 1 cm tree diameter at breast height (DBH). The cut should be spaced evenly around the tree and below all major branches. Application may be made at any time of year, except when cold temperatures prevent adequate penetration of injection equipment, or in the spring during periods of heavy sap flow. Control of tree species with leaves diameter greater than 20 cm may not be acceptable at this rate. Total control may not be evident for 1-2 years following treatment. A partial list of species controlled includes:

- Alder spp.
- Balsam spp.
- Birch spp.
- Cherry spp.
- Douglas-Fir

*This treatment may only provide suppression of Big-Leaf Maple. Late fall applications will provide optimum suppression of Big-Leaf Maple.

5.2.5 CUT STUMP APPLICATION

Woody vegetation may be controlled by the application of this product to freshly cut stumps to prevent regrowth. Because the treatment causes a concentrated solution, application must be made using low-pressure equipment e.g. u sausage, or similar device. This product must be applied immediately to the surface of the freshly cut stump e.g. within 5 minutes, for optimum control at the prescribed rates. Only the cambial tissues of the cut surface should be treated. Apply the herbicide solution at a rate equivalent to at least 0.33 mL VisconMAX Silverleaf herbicide for every 5 cm of DBH. Do not cover the remaining area of any exposed roots, as this product does not penetrate bark well. This treatment may be used at any time of year, except during periods of heavy sap flow or when low temperatures prevent solution application due to freezing. A water soluble coolant may be added to the solution as a means of reducing the amount of material being applied. Total control may not be evident until 1-2 years after treatment.
• Use higher end of the rate range for perennials.

5.3.7 SELECTIVE EQUIPMENT - WIPER APPLICATORS

This product may be applied with a wiper applicator, after dilution and thorough mixing with water, to listed weeds in the "Vegetation Controlled" section of this label. It may be used in any forestry site specified in this label.

A wiper applicator applies the herbicide solution onto weeds by rubbing the weed with an abundant material containing the herbicide solution. Equipment must be designed, maintained, and operated to prevent the herbicide solution from contacting desirable vegetation, except in cases of certain release operations where conifers are well hardened off (see "Conifer Release by Directing Spraying") (section 3). DO NOT TREAT Christmas tree plantations in the year of anticipated harvest.

5.3.8 APPLICATION RATES: WEED CONTROL IN INDUSTRIAL, RIGHTS-OF-WAY RECREATIONAL, AND PUBLIC AREAS

5.3.8.1 APPLICATION RATES: WEED CONTROL IN INDUSTRIAL, RIGHTS-OF-WAY RECREATIONAL, AND PUBLIC AREAS

Always read precautionary statements, general information and mixing and application sections (1.0, 2.0 and 3.0) prior to specific application information in any label section.

This product can be used to control annual and perennial weeds and woody brush and trees listed in this label in areas such as railroad, pipeline, highway, power and telephone rights-of-way, petroleum tank farms and pumping installations; roadsides, storage areas, lumberyards, fence rows, military impact areas; artillery/smaller arms ranges; troop training areas; ammunition storage bunkers; industrial plant sites; parking areas; school yards; parks; golf courses, other public areas; airports and similar industrial or non-crop areas.

Note: For all industrial, military bases, rights-of-way, recreational and public areas, repeat treatments may be necessary to control regeneration or new growth.
5.3.2 APPLICATION INFORMATION FOR INDUSTRIAL, MILITARY BASES, RIGHTS-OF-WAY, RECREATIONAL, AND PUBLIC AREAS USES

FOLIAR APPLICATIONS

Spray coverage should be uniform and complete. Do not spray to the point of run-off. Do not allow spray drift to contact desirable vegetation as severe injury or destruction may occur. For woody brush and trees, early season applications may take 30 to 45 days for symptoms to develop in target species. Late season application may be made to species that have some autumn colours present if no major leaf drop has occurred. Control will be observed the following spring. EXTREME CARE MUST BE EXERCISED TO AVOID CONTACT OF SPRAY WITH FOLIAGE OF DESIRABLE TURF GRASSES, TREES, SHRUBS, OR OTHER DESIRABLE VEGETATION SINCE SEVERE DAMAGE OR DESTRUCTION MAY RESULT.

This product does not provide residual weed control. For subsequent weed control, follow a labeled approved herbicide program. Read and carefully observe the cautionary statements and all other information appearing on the labels of all herbicides used.

5.3.3 SURFACTANTS

The following is a list of approved surfactants for use with VisionMAX Silviculture Herbicide for control of quackgrass for ground applications on industrial, rights-of-way, recreational and public areas uses when water volumes exceed 150 litres per hectare:

Agral® 50 Comparison® Xiameter OFX-0309 Fluid Ag Surf

Always refer to surfactant label for specific instructions regarding use of that product.

5.3.4 GROUND APPLICATIONS: FOR ALL INDUSTRIAL, MILITARY BASES, RIGHTS-OF-WAY, RECREATIONAL AND PUBLIC AREAS USES

For the control of annual and perennial weeds, woody brush and trees, apply 2 to 8 litres of this product per hectare (Refer to Section 5.3.1 for specific rates). Use a coarse mist nozzle or a mist blower, or a mist knapsack sprayer. Apply as directed in the recommended volume of clean water to foliage of actively growing vegetation. Use the 4 litres per hectare rate for control of Maples, Alders, Willow®*, Pine and Douglas Fir species, as well as for hard to control perennial weed species (*: suppression only). Spray coverage should be uniform and complete. Do not spray to the point of run-off. Do not allow spray drift to contact desirable vegetation as severe injury or destruction may occur. If weeds have been mowed or tilled, do not treat until regrowth has reached the recommended stages.

5.3.5 AERIAL APPLICATIONS: FOR INDUSTRIAL, RIGHTS-OF-WAY AND MILITARY BASES ONLY

For the control of annual and perennial weeds, woody brush and trees, apply 2 to 8 litres of this product per hectare (Refer to Section 5.3.1 for specific rates). Use the 4 litres per hectare rate for Maple, Alder, Willow®*, Pine and Douglas Fir species as well as for hard to control perennial weed species (*: suppression only). Use the recommended rates of this herbicide to 20 to 100 litres of water per hectare when application rates exceed 4 litres of product per hectare. When application rates exceed 4 litres of product per hectare, use 50 to 100 litres of water per hectare. This product may also be applied by aerial application for the control of annual and perennial weeds, woody brush and trees in arboreal impact zones on military bases.

As density of vegetation increases, spray volume should be increased within the recommended range to ensure complete coverage. Coarse sprays are less likely to drift; therefore do not use nozzles or nozzle configurations which disperse spray as free spray droplets. Do not angle nozzles forward into the air stream and do not increase spray volume by increasing nozzle pressure.

Ensure uniform application – Do not stroked, uneven or overlapping applications; use appropriate marking devices; or equivalent electronic positioning systems (EPS).

Thorough wash aircraft, especially landing gear, after each day of spraying to remove residues of this product accumulated during spraying or from spills. PROLONGE EXPLOSION OF THIS PRODUCT TO UNCOATED STEEL SURFACES MAY RESULT IN CORROSION AND POSSIBLE FAILURE OF THE PLATE. LANDING GEAR AND MOST SUSCEPTIBLE. THE MAINTENANCE OF AN ORGANIC COATING (PAINT) WHICH MEETS AEROSPACE SPECIFICATION MIL-C-38412 MAY PREVENT CORROSION.

5.3.6 PURPLE LOOSESTRIFE CONTROL

DO NOT TREAT PLANTS OVER OPEN WATER. VisionMAX Silviculture Herbicide is not registered for direct application to bodies of water.

For ground treating of purple loosestrife, treat when plants are actively growing and at or beyond the bloomed stage. If using hand held equipment, spray-to-wet.

For aerial treatments, see section 5.2.7. When feasible, remove flower heads before treatment to ensure prevention of seed set.

For large (>1.6 ha) monocultures of loosestrife, work from the periphery inward in successive years to allow competing vegetation to invade the treated area.

A long-term control strategy should include measures to control both established plants and seedlings. Sprayed areas should be monitored to determine the appropriate follow-up management. Early detection and treatment of second and third generation seedlings is important to prevent re-infection of purple loosestrife. Desirable native plant communities will then have a chance to become re-established.

5.3.7 COMMON REED (PHRAGMITES AUSTRALIS) CONTROL

DO NOT TREAT PLANTS OVER OPEN WATER. VisionMAX Silviculture Herbicide is not registered for direct application to bodies of water.

For ground treating of common reed, treat when plants are actively growing and in full flower. Treatment before or after seed set may prevent corrosion.

For larger monocultures of common reed, work from the periphery inward in successive years to allow competing vegetation to invade the treated area.

A long-term control strategy should include measures to control both established plants and seedlings. Sprayed areas should be monitored to determine the appropriate follow-up management. Early detection and treatment of second and third generation seedlings is important to prevent re-infection of common reed. Desirable native plant communities will then have a chance to become re-established.

5.3.8 SELECTIVE APPLICATION FOR ALL INDUSTRIAL, MILITARY BASES, RIGHTS-OF-WAY, RECREATIONAL, AND PUBLIC AREAS USES

Selective equipment such as WICK or WIPER applicators can be used to control emergent weeds in non-crop areas and tree plantings. See “Selective Equipment–Wiper Applicators” (section 5.2.7) for more information.

5.3.9 TURFGRASS RENOVATION

When applied as directed, under conditions described, this product controls most existing vegetation. Apply this product at rates specified in “Application Rates: Weed Control in Industrial, Military Bases, Rights-of-Way, Recreational and Public Areas” (section 5.3.1). DO NOT DISTURB SOIL OR UNDERGROUND PLANT PARTS BEFORE TREATMENT.

When existing vegetation is growing in a field or confined situation, apply this product to actively growing weeds. As density of the target vegetation increases, rate and spray volume should be increased within the recommended ranges to ensure effectiveness of the treatment.

When existing vegetation is growing under mowed turfgrass management, apply this product after emitting at least one regular mowing to allow sufficient growth for good interception of the spray and proper translocation into underground plant parts. Tillage or renovation techniques such as vertical mowing, scarifying or discing should be delayed for 7 days after application to allow proper translocation into underground plant parts. For maximum control of existing vegetation, delay establishment to determine if regrowth from escaped underground plant parts occurs. When repeat treatments are necessary, sufficient regrowth must be attained prior to application. Desirable turfgrasses may be established following the above procedures.

5.3.10 TREE PLANTINGS

SHELTERBELTS AND NURSERY STOCK (WOODY ORNAMENTALS)

This product may be used to control listed annual or perennial weeds (section 5.3.1) prior to planting of ornamental tree nurseries or shelterbelts of the following species:

DECIDUOUS

NOTE: This particular application is not recommended for use as an over-the-top broadcast or directed spray in tree nurseries, shelterbelts or in Christmas tree plantations. The use of VisionMAX Silviculture Herbicide could result in severe injury to the crop trees.

SHORT ROTATION INTENSIVE POPULAR CROPS
DO NOT APPLY BY AIR.

This product may be used to control listed annual or perennial weeds prior to planting, or as a post directed spray in established crops of short rotation intensive culture (SRIC) Poplar species (Populus spp.)

EXTREME CARE MUST BE EXERCISED TO AVOID CONTACT OF HERBICIDE SOLUTION, SPRAY, DRIFT, OR MIST WITH FOLIAGE OR GREEN BARK OF TRUNK, BRANCHES, SUCKERS, FRUIT CANES OF BLUEBERRY BUSHES, OR OTHER PARTS OF TREES OR VINES. CONTACT OF THIS PRODUCT WITH OTHER THAN MATURED BROWN BARK CAN RESULT IN SERIOUS CROP DAMAGE.

Reduced control may result when applications are made to annual or perennial weeds that have been mowed, grazed or cut and have not been allowed to regrow to the recommended stage for treatment.

VisionMAX Silviculture Herbicide may be applied prior to planting or as a post directed spray in established short rotation intensive culture crops. Apply VisionMAX Silviculture Herbicide up to 8 L/ha in 50 – 100 liters or 150 – 300 L/ha for quackgrass control by ground application only. Applications can be made 1-3 times per year during establishment however, not to exceed the limit of 8 L/ha per year. Shielded sprayers must be utilized when applying post directed spray solutions. Allow a 6-8 week interval between spray applications. Apply to actively growing weeds.

FIRST AID

If swallowed:

Immediately rinse the mouth. Do not give anything by mouth.

If inhaled:

Get fresh air and remove to fresh air. If not breathing, give artificial respiration. If breathing, give nothing by mouth.

If in contact with the skin:

Wash with plenty of soap and water. Remove contaminated clothing. Rinsing may be necessary. If not breathing, call emergency services.

If in contact with the eyes:

Wash with running water. Do not rub. Call an emergency service.

If the user is unconscious:

Do not give anything by mouth. Call emergency services. Do not move the unconscious person. If breathing, give artificial respiration. If not breathing, call emergency services.

If the user is breathing:

Provide breathing assistance. Call emergency services.
