

CLEAN FIELDS GET NOTICED

VARRO®

Varro® herbicide provides wheat growers the freedom to effectively control wild oats (including Group 1-resistant biotypes), without restricting their re-cropping intentions, giving them the ability to rotate back to pulse crops the next season.

EARLY WEED CONTROL FOR OPTIMUM PERFORMANCE

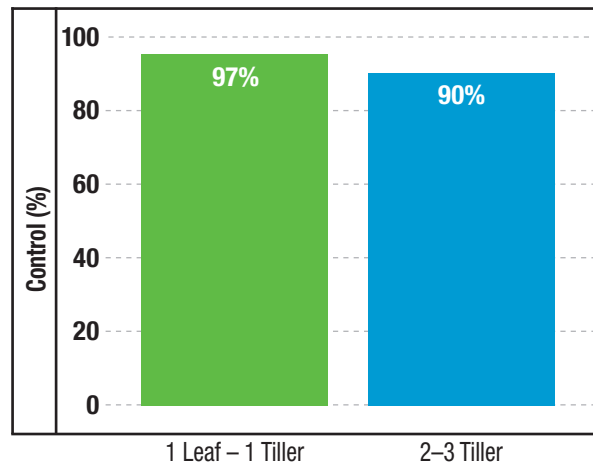

Bayer herbicides including Varro, Velocity m3 and Luxxur® provide a +7% increase in weed control when applied early into the season

Velocity^{ms} VARRO® LUXXUR®

Bayer internal trials, n=78

Thiencarbazono-Methyl Group 2

HERBICIDE
Grass Control

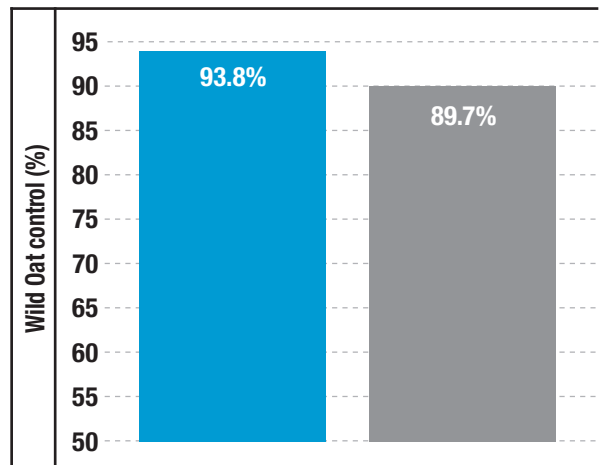

Battle Group 1 – Resistant Wild Oats

THE VARRO ADVANTAGE

- // Varro provides strong performance on grass weeds such as wild oats, barnyard grass, Persian darnel, green foxtail, yellow foxtail, canary seed and Japanese brome
- // Group 2 technology allows for control of problematic Group 1– resistant wild oats and foxtail
- // Allows crop rotation flexibility to sensitive crops like lentils and dry beans
- // Varro enhances the overall control of its broadleaf tank-mix partners
- // Exceptional crop safety and a wide window of application (1 to 6 leaf stage, plus 3 tillers, prior to first node)

VARRO VERSUS THE COMPETITION

■ Varro + AMS ■ Simplicity® + Assist®
